To Whom It May Concern,

I am writing to wholeheartedly recommend **Anabelle Gutman**, who interned with us at **Interstellar Lab** during 09/2024 - 02/2025. From the beginning, she showed exceptional initiative, strong technical skills, and an impressive ability to learn quickly and work both independently and collaboratively.

Her internship initially focused on the development of **thermodynamic simulation tools using machine learning models**, with the aim of predicting environmental conditions. While this was already a challenging and ambitious subject, she not only completed this work successfully but went beyond that project. Thanks to her strong technical foundation, curiosity, and proactive attitude, she contributed to several advanced projects during her time with us. These included work on **depth estimation using deep learning models**, **computer vision algorithm development**, as well as **laboratory experimentation and statistical data analysis**.

Beyond her technical achievements, she integrated exceptionally well with our team. She's a thoughtful, motivated, and approachable individual who listens actively, asks the right questions, and consistently seeks ways to improve. She also demonstrated great adaptability in working with a multidisciplinary team of scientists and engineers — a testament to both her communication skills and professional maturity.

She brings a rare combination of technical strength, a problem-solving mindset, and a collaborative spirit. I have no doubt that she will be an asset to any organization she chooses to join, and I strongly recommend her without reservation.

Please feel free to reach out to me at *altunluengin@gmail.com* if you would like further information.

Sincerely,
Engin Altunlu
